DIGITALLY TRANSFORM
YOUR PARCEL DELIVERY OPERATIONS

A COMPREHENSIVE **COURIER AND POST MANAGEMENT SOFTWARE** THAT LETS YOU COMPETE SCALE TO HANDLE ALL TYPES OF SHIPMENTS

Home deliveries are the norm - be it big & bulky items or small packages. Customers expect delivery in specified time windows along with options like curbside pickup, parcel lockers and easy returns.

LogiNext for **Courier, Express and Parcel** is a real time visibility platform which helps the operations team have a complete overview of operations with actionable insights to make sure the order lifecycle goes through seamlessly.

The vehicle routing and scheduling algorithm along with features like service types and delivery driver management make it possible to deliver quick and smart along with achieving business goals.

" We've undergone a massive digital transformation journey in partnership with *LogiNext, Oracle and KPMG* and it is contributing significantly to the growth of the company "

MARIO TEJADA
CHIEF EXECUTIVE OFFICER

ALMO

BENEFITS

- Get a complete view over delivery operations through a **map based visualization** on the live screen.

- Go granular and give advanced capabilities to your shippers through **service area profiling** along with zone and tier mapping

- Keep the end customer updated about order **delivery ETA** at all times with geofence and timefence based alerts & notifications

- Digitally transform your logistics operations through easy **API integrations**, digital inscan/outscan and carrier invoicing.

TECHNICAL FEATURES AND CAPABILITIES

Serviceability APIs
Configure pin code based serviceability rules for dynamic order scheduling

Tier Mapping
Configuring costing of a service by mapping tiers to service area profiles

Tracking Links
Trigger delivery time communication links to the end customer in your custom branding

Zone Mapping
Tag customer segments to zones on the basis of pickup location

Live Tracking™
Track the status updates on orders, drivers & trips on a single map in real-time along with auto allocation of orders and controlling routes and drivers in real time

Geofencing
Set location based alerts and notifications to notify operation managers and end customers

Control Tower
Dashboard view of key critical KPIs like real-time status update on all orders, in-transit delayed orders and the reason for not delivered or missed orders.

ePOD and eSigns
Check and authenticate all deliveries at the point of exchange with secure ePODs and eSigns, along with live customer feedback.

LogiNext's comprehensive platform with an extensive API integration marketplace makes it convenient for CEP brands to digitally transform their supply chain and deliver a superior end customer experience
